TABLE OF LEVELS

Level	Approximate level data
Zero	▪ PullUps BW 0-5 reps ▪ Push-ups BW 0-10 reps
Beginner	▪ Pullups BW 12-15 reps or +20-40kgx1 ▪ Push-ups 20-25 repswith +15kg ▪ Dip 30-50kg x1 rep ▪ Muscle Up BW x1-3
Medium	▪ PullUp 40-70kg x1 ▪ Dip 50-100kg x1 ▪ Muscle Up 10-20kg x1
Advanced	▪ PullUp 70-100kg x1 ▪ Dip 100-150kg x1 ▪ Muscle Up 20-40kg x1
Ultra-Advanced	▪ PullUp 100-120kg and abovex1 ▪ Dip 150-195kg and above x1 ▪ Muscle Up 40-70kg and above x1

This table may have nothing to do with objectivereality. For some people these standards may be overstated and for others are underestimated. Even official strength sportsfederations can issue subjective norms.

ABOUT THE PROGRAM

The Zero Level program is for those who want to start training but don't know where to start. Atthis stage you do not know how to do pull-ups on the bar and
do Dips on the uneven bars, even with your Bodyweight, not even once. If you are already confidently doing 12-15 pull-ups and
do 20-25 push-ups from the floor, then skip thislevel and go straight to move on to the next level.
The Goal of this program is to learn how toperform basic basic movements, train neuromuscular communication, build muscle mass and increase number of reps: pull-ups from 0 to 12-15, and push-ups from 0 to 20-25 with a little extra weight. How long will it take you to reach this level will depend on you specifically, but on average it will take six months. At level zero, instead ofbars, you will do push-ups from the floor, as Dips require a certain degree of fitness. Before you start training, make sure you have all the right equipment for the workout, this is very important!

INVENTORY

First, let's break down the inventory, whichyou will need at this level and beyond:

1. Bar for Pullup and Bar for Dip (bars for dip 5-10 cm wider than shoulders)
2. Additional weighting in the form of thinweights for entry level minimum 60kg: 15kg - 2 pcs. and 10kg - 2 pcs. and small pancakes 5kg, 2.5kg, 1.25kgand 0.5kg - 2 pcs. each. If there are no pancakes, at least use kettlebells, but with them it will be less comfortable to study.
3. Belt, carabiners and rope (or chain) tohang extras on weight bearing.
4. We also need practice rubber loops, here Irecommend getting a set of 4 from the thinnest to thick.

I should also point out that for level zero, we <u>only</u> need a horizontal bar and rubber loops, aswell as a stack of books to adjust the amplitude of the push-ups from the floor.

BASIC CONCEPTS

BW - Bodyweight, own weight (pull-ups with bodyweight).

3x6 - Approaches X Repetitions

The reserve - is the number of repetitions you couldstill do after made a plan approach. Determined by how you feel. For example, if you have done **6** repetitions but feel that you would **2** more repetitions, then the reserve will be **2** repetitions.

Volume - is the number of sets and reps per workout, week or month

Intensity - is the load you endure during the exercise. (addingextra weight, making exercises more difficult, increasing speed of execution)

WARM-UP

A proper warm-up takes only 10-15 minutes and isnecessary to prepare your body for the work ahead and reduce the likelihood of getting
injuries. The warm-up will be divided into 3 stages:

1. At the beginning of the warm-up, perform 5 minutes of cardio to get your heart rate up. Jumping rope or not, light jogging, running inplace or a brisk walk to the gym. This will be awarm-up for your heart.
2. This is followed by a joint warm-up of all parts of the body, which are the neck, shoulders,elbows and hands,

back, pelvis, knees and feet. 10-15 strokes or rotations for each part of the body.

3. Afterwards, you should do a warm-up before the main pull-up and push-up movements.
   Back pulls and pectoralisers are good for this. One to two sets of 10-15 repetitions with thethinnest elastic band is enough.
   Between all three warm-up phases
   Rest for 20-40 seconds according to how you feel.

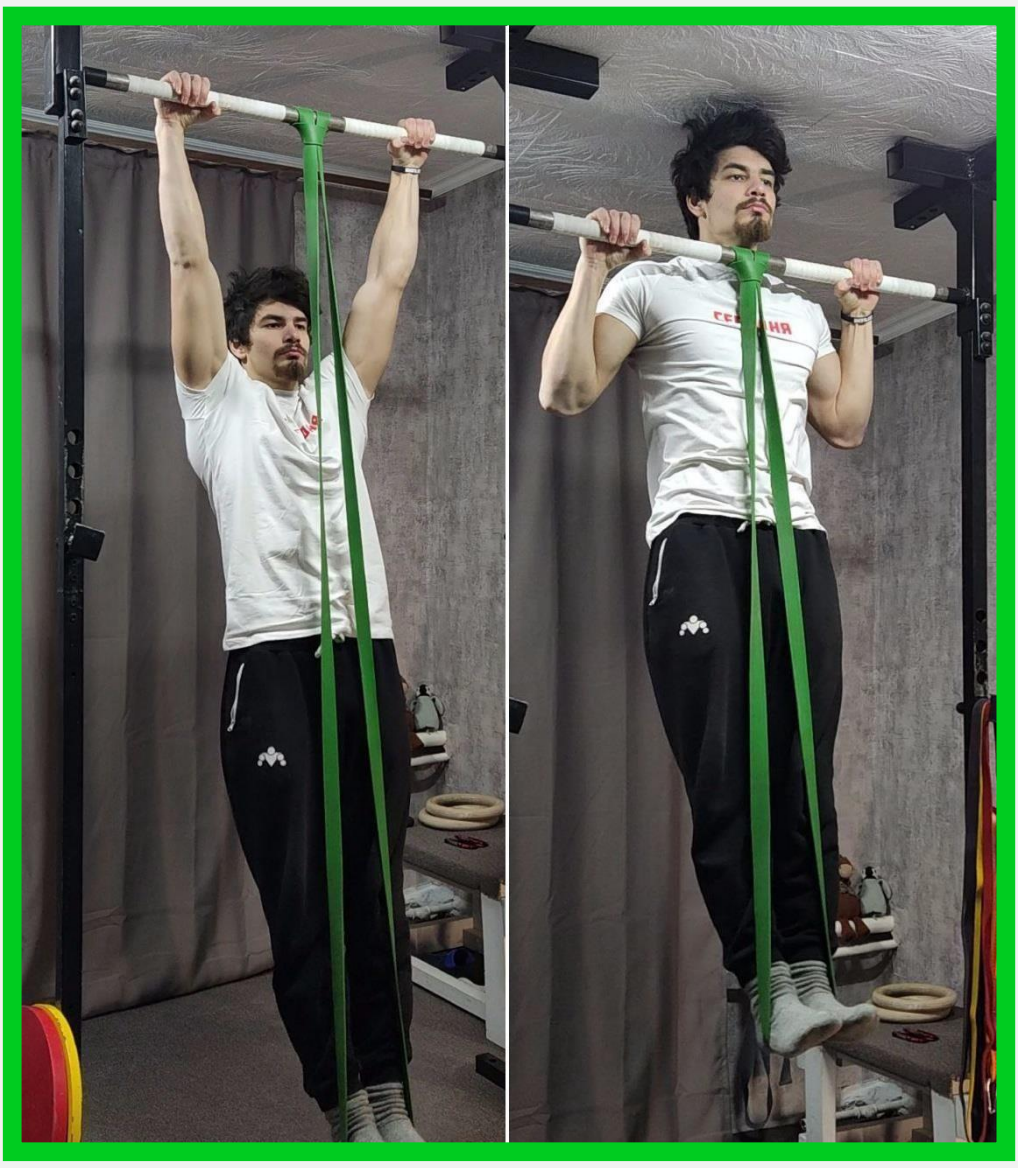
EXERCISE VARIATIONS (CYCLES)

Variations of pull-ups

(1 cycle (1 variation) lasts 3 weeks or more

1. With the thickest green rubber(width 44mm)
2. With less thick purple rubber (28mm)
3. With medium red rubber (20mm)
4. With thin yellow rubber (10mm)
5. With your own weight
6. With extra weight (moving up to the next level)

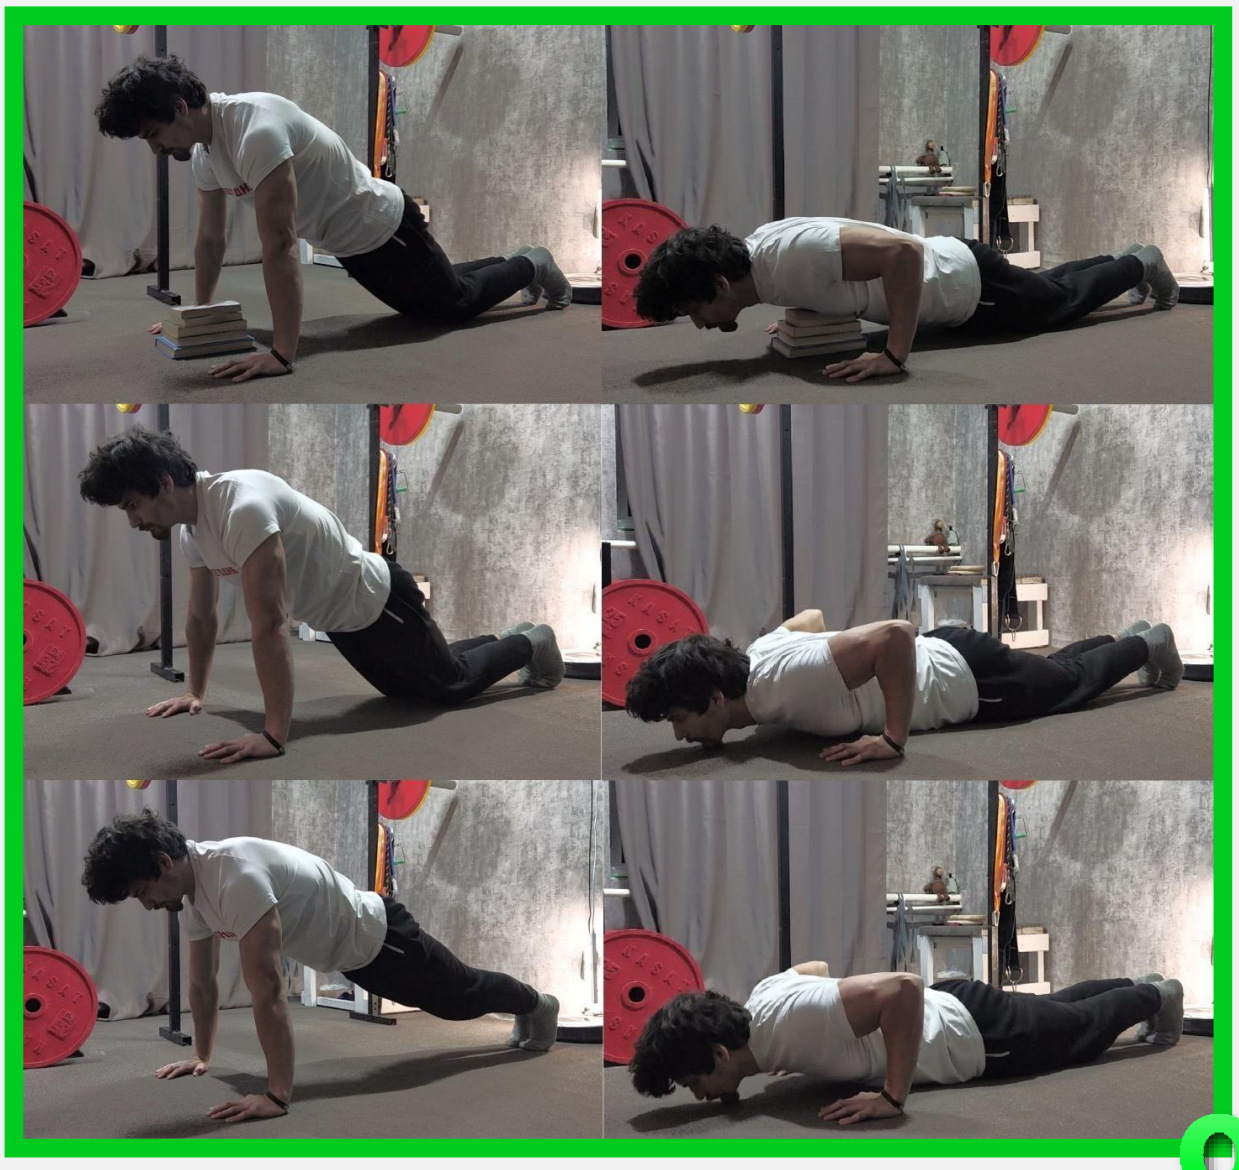
! I would like to point out that the colour of the rubbervaries from manufacturer to manufacturer. It may differ from what I have written. The most important thing is the width of the elastic band. Itdetermines the degree of tension and the load.



Variations of push-ups from the floor

(1 cycle lasts about 3 weeks or more)

1. Knee push-ups and with books underneath breastfeeding. (Remove 1 book every week or two)
2. From your knees and already without books (touching the floor withyour chest)
3. Full push-ups (chest touching the floor)
4. Full with extra weight on the back (Pancakes, Backpack withweight)
5. Push-ups on uneven bars with extraweight <u>(move to the next level)</u>



PROGRAM

Pull-ups

The week	Mon	Wed	Friday	Rest between approaches
1 light	3x6	3x7	3x8	3-4 min.
2 heavy	3x9	3x10	3x11	5-6 min
3 peak	3x12	2x8	BW 1xMAX	Mon 6-7 min Wed 2-3 min
Next Week	3x6 Change to thinner rubber			

Push-ups from the floor

The week	Mon	Wed	Friday	Rest between approaches
1 light	3x8	3x10	3x12	3-4 minutes
2 heavy	3x14	3x16	3x18	5-6 min
3 peak	3x20	2x12	Full BW 1xMAX (+2.5kg)	Mon 6-7 min Wed 2-3 min
Next Week	3x8 Change to a more difficult variationor or +weight			

The number of repetitions in pull-ups is increased by 1 with each workout, in push-ups by 2.
For 3 weeks you increase the number of repetitions with the same resistance band on the bar or a variation of push-ups. Only after the workout highlighted in red do you increase the load, i.e. train as follows
variations the list of which is given earlier.

Squatting

The week	Monday (heavy)	Friday (light)	Rest between approaches
1.	3x8 +2.5kg	2x6	Mon 5-8 min
2.	3x10	2x6	Fri 3-4 min.
3.	3x12	2x6	
Follow-upweek	3x8 +2.5kg or +5kg		

Body muscles

Mon	Wed	Fri
Plank on theelbows 3x20sec Stomach boat 3x30s	Twists with extra weight 3x10 Boat rises 3x12	Hang-up on thebar 3x6 Hyperextension 3x10
Next week: increase reps by 1 or seconds by2-5		

First, let's look at what they look like
the training cycles (phases, variations) in a given program, namely in
pull-ups and push-ups. One cycle is a period of several workouts in which from workout to workout you gradually
The volume (approaches and repetitions) increasesand only after reaching a certain point volume increases in intensity on the next cycle.

The principle of this program is that you yourself can choose a better load under You can choose the number of repetitions and the load that you can handle, for example, instead of the thicker green rubber you can start with the thinner purple one, and start thecycle with 3x8 instead of 3x6.

The most important thing is to increase the number of repetitions from workout to workout and every 3 weeks to increase the load, i.e. to take a thinner rubber on the chinning bar or to complicate the exercise in push-ups. Note the last one The third week's workout, where you test your maximum with your own weight in one rep, thenumber of repetitions should increase by 1-3 repetitions from the previous peak training. If after phase 1 (variations) you have learned to do a CB pull-up at least 1-2 times, then congratulations, you progressed! Only then do you start the next phase on the same program, but with a thinner purple rubber. This is how you repeat a three-week phase with an increasingly subtle with a rubber band until you get to BW training. Everything written above also applies to The push-ups are the same as the floor push-ups, except that progression is made by making them more difficult

the exercise itself. Push-ups start with the easiest variation from the knees and with with a stack of books under your chest. At the expense of the stack of books, the amplitude ofthe movement is reduced, thus This makes the push-ups much easier. Also, push-ups from the knees reduce the leverageand this relieves the load even more. Every week or two, remove one book to makethe exercise more difficult.

Friday's last week of full push-ups, showing agood result in
in one approach to the maximum if you have done 22-25 push-ups from the floor, thenyou can confidently switch to push-ups with extra weight.
This is where you need to put on +2.5kg pancake backpack, or you can do without a backpack and just put a pancake on your back. And so once every 3 weeks you check your maximum for 1 approach with with the same extra weight you have been working with all these 3 weeks. Every 3 weeksadd
+2.5kg or +1.25 to the extra weight, no more. Ideally reach 20-22 reps with +15kg and afterthat you can move to the entry level, where you will move to
push-ups on the uneven bars with extra weight.
In Pull-ups taken to the next level after completing 12 repetitions in one roundwith your bodyweight on Friday's last workout.

An example of your progress in The table below will serve as a guide to the training sessions, which are not tied to the day of the week, but run one day at a time.
rest between each:

MONDAY	WEDNESDAY	FRIDAY
Pull-ups withgreen rubber 3x6 Push-ups with knees with 3x8 books	Pull-ups withgreen rubber 3x7 Push-ups with knees with books 3x10	Pull-ups with green rubber 3x8 Push-ups with knees with books 3x12
MONDAY	**WEDNESDAY**	**FRIDAY**
Pull-ups with green rubber 3x9 Push-ups with knees with books 3x14	Pull-ups Withgreen rubber 3x10 Push-ups with knees with books 3x16	Pull-ups With green rubber 3x11 Push-ups with knees with books 3x18
MONDAY	**WEDNESDAY**	**FRIDAY (Max)**
Pull-ups With green rubber 3x12 Push-ups withknees with books 3x20	Pull-ups With green rubber 2x8 Push-ups with knees with books 2x12	Pull-ups with BodyWeight 1x5 Push-ups with BW 1x7
MONDAY (change to thinner rubber (next cycle))		
Pull-ups With purple res. 3x6	Knee push-ups Without books 3x8	

But what to do if you don't comply training according to a plan? An example is a training session in which you have to do
Pull-ups 3 sets of 10 reps, but instead you got 10 repsin set 1, 8 reps in set 2 and 7
reps in 3 sets (10 - 8 - 7). In such a situation you should not get frustrated, but rather
pull yourself together with all your strength and repeat the same 3x10 workout at the next trainingsession.
But if the next workout also fails, then the next workout should do 60-70% of the reps from theprevious workout in 2
approaches with the same rubber. This would becalled an unloading workout. Here is an example(unloading on Wednesday):

Monday	**Wednesday**
Pull-ups with purple 10 - 8 - 7 (plan to do 3x10) Knee push-ups 16 - 14 – 13 (the plan is to have 3x16)	Pull-ups with purple 10 - 9 - 8 (plan to do 3x10) Knee push-ups 16 - 16 – 14 (the plan is to have 3x16)
Friday (unloading)	**Monday**
Pull-ups with purple 2 x 6 Knee push-ups 2 x12	Pull-ups with purple 3 x 10 Knee push-ups 3 x16

STRETCH

We don't need a bunch of variations to stretch in just the one below:

1. Hang on the bar with both hands or on onehand, depending on your level.
2. (Stretches the back, arm, abs and chestmuscles)
3. Holding the bottom position on the bars in fullextension. (stretching the pecs, triceps, shoulder girdle)
4. Reverse hanging on the bar. (shouldergirdle, back)
5. Plank on straight arms with a bend, touching the floor with your belly. (Stretches the front part of the body, i.e. the abs)

Do 2-3 approaches of 30-40 seconds at the end of your workout.

NUTRITION AND SLEEP

There are some basic principles of recovery from training! Eat right and get a good night's sleep and your progress will take off like a bird in the sky! To be more specific, it is a good idea to start by adjusting your diet, i.e. removing rubbish from yourdiet: cakes, biscuits, sodas, Snickers bars, sweets, chocolate bars and so on. You can eat these things,but preferably very rarely. The next thing to do is toget rid of
bad habits, stop using
alcoholic drinks and smoking cigarettes.
Firstly - it will slow down your progress in training, and secondly, it will be even more detrimental when combined with training. Between training sessions, you need to givenutrition
your body as much as possible, eating lots of slowand fast carbohydrates as well as protein and fats. Fast carbohydrates include fruit such as apples and bananas, dried fruit such as sultanas and dates, or confectionery such as marshmallows,marshmallows or marmalade. Slow carbohydrates include pasta, oatmeal and rice,
buckwheat, millet and similar cereals. After
A protein-fat meal is desirable. Any whole meat ormeat cutlets, eggs and pulses in the form of peas. Butter and nuts can also be consumed as sources of fat.
The most important thing in your diet is to avoidcombining proteins and
fat with carbohydrates, i.e. eating a separate diet,especially I don't recommend

combine fats and carbohydrates. This is done inorder to eat much more than usual to increase your daily calorie intake. Protein and carbohydrates should also be eaten separately, so thatproteins can be digested quickly and without putrefaction. Protein is best combined with fibre, and vegetables will serve this purpose.
I highly recommend a split diet and calorie deficit for athletes who are overweight. Also, to train hard,increase your daily activity and work out more often.
look specifically in the mirror, as the scale doesnot give you full information on your body recomposition. (Body recomposition is thesimultaneous burning of fat and gaining
muscle mass). Do at least 10k steps a day, get agood night's sleep and don't eat your stress withcrap.

I won't tell you anything new about **sleep** either:

1. A minimum of eight to nine hours of sleep.
2. Ventilate the room before going to bed.
3. Sleep in complete darkness and silence.
4. Don't eat or drink an hour before bedtime.
5. Turn off all gadgets and lights at home onehour before bedtime.
6. Improve the sleeping place: buy a morecomfortable pillow and mattress.
7. Don't set a loud alarm clock to the body is not under stress. It is better to wakeup without an alarm clock at all.

Thank you for purchasing this program! I hope you will start your training journey withthis program, as I used a similar progression method with rubber myself a long time ago. The load in this program is the most optimal, you can adjust yourself
it to your liking.
Good training and progress!

Regards, your mentor Andrei Pakin
